## Claims

[c1]

1. A computerized method of assisting the routing of a part, comprising the steps of:

providing at least one computer;
receiving part identifier information; and
generating a tag for affixing to said part, said tag having
information thereon responsive to said part identifier
information;

wherein a user reviews said information on said tag and routes said part accordingly.

- [c2] 2. The method of claim 1, further comprising the steps of:

  evaluating a characteristic of said part based upon said

  information on said tag to determine a disposition of said part;

  receiving said disposition of said part; and

  generating a new tag for affixing to said part, said tag having

  information thereon responsive to said part characteristic;

  wherein said user can review said information on said tag and

  route said part accordingly.
- [c3] 3. The method of claim 1, wherein said part identifier information includes a part number.
- [c4] 4. The method of claim 3, wherein said part identifier information also includes a serial number.
- [c5] 5. The method of claim 1, further comprising the step of generating an electronic record of said part.
- [c6] 6. A computerized method of assisting the handling of a part, comprising the steps of:

providing at least one computer; receiving part identifier information;

1 450 -1 01 7.

processing said part identifier information; and generating output from said computer responsive to said part identifier information; wherein a user reviews said output and handles said part accordingly.

[c7] 7. The method of claim 6, wherein said part identifier information includes a part number.

ĺ

- [c8] 8. The method of claim 7, wherein said part identifier information also includes a serial number.
- [c9] 9. The method of claim 6, wherein said output comprises routing instructions.
- [c10] 10. The method of claim 6, wherein said output comprises work instructions.
- [c11] 11. The method of claim 6, further comprising the steps of:
  receiving a disposition of said part in response to said output;
  processing said part disposition; and
  generating output from said computer responsive to said part
  disposition.
- [c12] 12. A computerized method of tailoring work instructions to perform on a part, comprising the steps of:

providing at least one computer having memory with global work instructions therein, said global work instructions relevant to a plurality of parts and to a plurality of work locations; receiving part identifier information and work location information; processing said part identifier information and said work location information; and

generating tailored work instructions from said computer responsive to said part identifier information and said work

location information;

wherein a user reviews said tailored work instructions and performs said tailored work instructions accordingly.

- [c13] 13. The method of claim 12, wherein said processing step comprises searching said global work instructions for tasks relevant to said part and said work location.
- [c14] 14. A computerized method of dispositioning of parts, comprising the steps of:

providing at least one computer;

receiving part identifier information for a first part;

determining a disposition of said first part responsive to said first part identifier information;

receiving part identifier information for a second part to said computer;

determining a disposition of said second part responsive to said second part identifier;

determining whether said second part disposition requires adjustment to said first part disposition; and if necessary, modifying said first part disposition;

> wherein a user reviews said first and second part dispositions and dispositions said first and second parts accordingly.
